In microbiology, the minimum inhibitory concentration (MIC) is the lowest concentration of a chemical, usually a drug, which prevents visible growth of bacterium. MIC depends on the microorganism, the affected human being (in vivo only), and the antibiotic itself. The MIC is determined by preparing solutions of the chemical in vitro at increasing concentrations, incubating the solutions with ...

Minimum inhibitory concentration - Wikipedia

{{configCtrl2.info.metaDescription}} INTRODUCTION. Blood is one of the most important specimens received by the microbiology laboratory for culture, and culture of blood is usually the most sensitive method for detection of bacteremia or fungemia.

Bacteria (/ b æ k ' t i æ r i ə / ()); common noun bacteria, singular bacterium) are a type of biological cell. They constitute a large domain of prokaryotic microorganisms. Typically a few micrometres in length, bacteria have a number of shapes, ranging from spheres to rods and spirals. Bacteria were among the first life forms to appear on Earth, and are present in most of its habitats.
