Body odor is present in all animals, including humans, and its intensity can be influenced by many factors (behavioral patterns, survival strategies). Body odor has a strong genetic basis, but can also be strongly influenced by various diseases and physiological conditions. Though body odor has played an important role (and continues to do so in many life forms) in early man, it is generally ...

Body odor - Wikipedia

HYPERTHYROIDISM. Pigmentation occurs in about 10% of patients with primary thyrotoxicosis. It is usually diffuse and is broadly of Addisonian pattern but involvement of the mucous membranes is uncommon and pigmentation of nipples and genital skin is less striking.

A quantitative trait locus (QTL) is a locus (section of DNA) which correlates with variation of a

quantitative trait in the phenotype of a population of organisms. QTLs are mapped by identifying which molecular markers (such as SNPs or AFLPs) correlate with an observed trait. This is often an early step in identifying and sequencing the actual genes that cause the trait variation.

Quantitative trait locus - Wikipedia

Poultry Genetics for Exhibition Breeders. Another influence to shank colour is the gene Fm (Fibromelanosis). This dominant gene is responsible for the dark flesh colour of the Silkie fowl.
