The fourth edition of Gene H. Golub and Charles F. Van Loan's classic is an essential reference for computational scientists and engineers in addition to researchers in the numerical linear algebra community. Anyone whose work requires the solution to a matrix problem and an appreciation of its mathematical properties will find this book to be an indispensable tool.

Matrix Computations - Gene H. Golub, Charles F. Van Loan ...

While an MSc student, I heard about the impending publication of a new book on matrix computations by Golub and Van Loan. I pre-ordered a copy and in spring 1983 received one of the first copies in the UK. The book was a revelation. It presented a completely fresh and up to date perspective on the subject. Some of the most exciting features were

Matrix Computations - Cornell University

Gene Golub was an important figure in numerical analysis and pivotal to creating the NA-Net and the NA-Digest, as well as the International Congress on Industrial and Applied Mathematics. One of his best-known books is Matrix Computations, co-authored with Charles F. Van Loan. He was a major contributor to algorithms for matrix decompositions.

Golub/Van Loan is not written in a very compelling style (very formal), but it is a great reference to understand how and why numerical matrix computation work. I've used it extensively for developing my own Singular Value Decomposition (SVD) routine, as well as routines for general eigenvalue problems.

Matrix Computations (Johns Hopkins Studies in the ...

It has been sixteen years since the last edition of this well-known text on matrix computations. This new edition is about 25% longer than the previous one and much has been added: new topics, expanded treatments, and substantial upgrades. The book is in part a kind of tribute from Van Loan to his co-author Gene Golub, who died in 2007.
