Principles and Practice of Infectious Diseases, 7/e

Infectious mononucleosis (IM, mono), also known as glandular fever, is an infection usually caused by the Epstein-Barr virus (EBV). Most people are infected by the virus as children, when the disease produces few or no symptoms. In young adults, the disease often results in fever, sore throat, enlarged lymph nodes in the neck, and tiredness. Most people recover in two to four weeks; however ...

Infectious mononucleosis - Wikipedia

Chronic Lyme disease (not to be confused with Lyme disease) is a generally rejected diagnosis that encompasses "a broad array of illnesses or symptom complexes for which there is no reproducible or convincing scientific evidence of any relationship to *Borrelia burgdorferi* infection." Despite numerous studies, there is no clinical evidence that "chronic" Lyme disease is caused by a persistent ...

INTRODUCTION. Fusarium species cause a broad spectrum of infections in humans, including superficial infections such as keratitis and onychomycosis, as well as locally invasive and disseminated infections [1]. Invasive and disseminated infections occur almost exclusively in severely immunocompromised patients, particularly among those with prolonged and profound neutropenia and/or severe T cell ...

The majority of paediatricians and family physicians in practice in Canada today have never seen a case of congenital syphilis. However, there have been outbreaks of syphilis across Canada since 2001, such that the incidence has increased from a low of 1.6 cases/100,000 in 1999 (499 cases) to 10.1/100,000 in 2014 (3589 cases)[1]. The initial increase in incidence was concentrated in men who ...
