Genetics is a discipline of biology. It is the science of heredity. This includes the study of genes, and the inheritance of variation and traits of living organisms. In the laboratory, genetics proceeds by mating carefully selected organisms, and analysing their offspring. More informally, genetics is the study of how parents pass some of their characteristics to their children.

Mendel tested the seven types of traits, and all seven worked the same way. In every case, 1/4 of the total F2 were true breeding (homozygous) dominant, 1/2 were non-true breeding (heterozygous) dominant, and 1/4 were true breeding recessive (homozygous). Mendel used algebraic symbols to represent what was happening.

Lamarckism (or Lamarckian inheritance) is the hypothesis that an organism can pass on characteristics that it has acquired through use or disuse during its lifetime to its offspring. It is also known as the inheritance of acquired characteristics or soft inheritance. It is inaccurately named after the French biologist Jean-Baptiste Lamarck (1744–1829), who incorporated the action of soft ...
