Beta thalassemia is a hereditary disease affecting hemoglobin. As with about half of all hereditary diseases, an inherited mutation damages the assembly of the messenger-type RNA (mRNA) that is transcribed from a chromosome. DNA contains both the instructions for stringing amino acids together into proteins, as well as stretches of DNA that play important roles in regulating produced protein ...

A disease is a particular abnormal condition that negatively affects the structure or function of part or all of an organism, and that is not due to any external injury. Diseases are often construed as medical conditions that are associated with specific symptoms and signs. A disease may be caused by external factors such as pathogens or by internal dysfunctions.

## **Disease - Wikipedia**

Disease, any harmful deviation from the normal structural or functional state of an organism, generally associated with certain signs and symptoms and differing in nature from physical injury. A diseased organism commonly exhibits signs or symptoms indicative of its abnormal state. Thus, the normal condition of an organism must be understood in order to recognize the hallmarks of disease.

Complete blood count. The dog's blood often tells the story of his illness. A complete blood count, or hemogram, includes a look at the numbers of red and white blood cells and tells the veterinarian whether a dog is anemic, has an infection, or has a clotting factor disease. Blood for the test is drawn into a tube that contains an anti-coagulant so the blood doesn't clot.
