In chemistry and physics, Dalton's law (also called Dalton's law of partial pressures) states that in a

mixture of non-reacting gases, the total pressure exerted is equal to the sum of the partial pressures of the individual gases. This empirical law was observed by John Dalton in 1801 and published in 1802. and is related to the ideal gas laws

A single-displacement reaction, also known as a single-replacement reaction, is a reaction by which one (or more) element(s) replaces an/other element(s) in a compound. It can be represented generically as: $A + B-C \rightarrow A-C + B$. This will most often occur if A is more reactive than B, thus giving a more stable product.. A and B must be either: Different metals (hydrogen's behavior as a cation ...

La couche de valence (ou couche périphérique → électrons de valence) d'un atome est sa dernière couche électronique partiellement ou totalement remplie. Elle est caractérisée par le nombre quantique principal le plus élevé. Ce sont les électrons de la couche de valence, appelés électrons de valence, qui interviennent dans les liaisons chimiques.
