Toward New Physics. One of the unsolved problems of nineteenth-century science was the question of the nature of light. Newton, who experimented with light and published his results in Opticks (1704), believed light to consist of minute particles. This corpuscular theory was consistent with the rectilinear propagation of light, but it failed to explain light's refraction (bending on passing ...

Over the next six decades, astronomers continued to monitor the motion of Uranus along its 84 year orbit and computed ephemerides of its position over time based on the then-known properties of the giant planets (e.g., Bouvard 1824). The calculations and the observations were not in perfect agreement, with the differences between the theoretical longitudes and the observed longitudes of the ...
