In microbiology, the minimum inhibitory concentration (MIC) is the lowest concentration of a chemical, usually a drug, which prevents visible growth of bacterium. MIC depends on the microorganism, the affected human being (in vivo only), and the antibiotic itself. The MIC is determined by preparing solutions of the chemical in vitro at increasing concentrations, incubating the solutions with ...

Bacteria (/ b æ k ' t i æ r i ə / ()); common noun bacteria, singular bacterium) are a type of biological cell. They constitute a large domain of prokaryotic microorganisms. Typically a few micrometres in length, bacteria have a number of shapes, ranging from spheres to rods and spirals. Bacteria were among the first life forms to appear on Earth, and are present in most of its habitats.

### Bacteria - Wikipedia

Nares: Insert swab into one anterior naris. Apply slight pressure to the nostril and rotate swab to sample the inside surface. Insert the same swab into the other naris and repeat. Place swab into swab transport tube.
