Hyperkalemia or high blood potassium is a condition caused by abnormally high levels of potassium in the blood. Symptoms of hyperkalemia include nausea, muscle weakness, and tingling sensations. Medications and certain medical conditions cause hyperkalemia, which can then cause kidney failure, cardiac arrest, or death.

Hyperkalemia Symptoms, Signs,Causes & Treatment (Insulin)

ECG should be done on patients with hypokalemia. Cardiac effects of hypokalemia are usually minimal until serum potassium concentrations are < 3 mEq/L. Hypokalemia causes sagging of the ST segment, depression of the T wave, and elevation of the U wave. With marked hypokalemia, the T wave becomes progressively smaller and the U wave becomes increasingly larger.
