## Mongo Db leee Paper 2012

**Abstract:** In this paper we will try to present a comparative study of non-relational databases and relational databases. We mainly focus our presentation on one implementation of the NoSQL database technology, namely MongoDB, and make a comparison with another implementation of relational databases, namely MySQL, and thus justifying why MongoDB is more efficient than MySQL.

MongoDB becomes favorable. This paper attempts to use NoSQL database to replace the relational database. It mainly focuses on one of the boosting technology of NoSQL database i.e. MongoDB, and makes a comparison with MySQL and thus justifies why MongoDB is preferred over MySQL. ... ## SQL Support over MongoDB using Metadata - IJSRP

The addition of multi-document, ACID transactions in MongoDB 4.0 makes MongoDB the only database to combine the ACID guarantees of traditional relational databases, the speed, flexibility, and power of the document model, with the intelligent distributed systems design to scale-out and place data where you need it.

## [White Paper] MongoDB Multi-Document ACID Transactions

In this paper, we show how NoSQL databases such as MongoDB and its key-value stores, thanks to the native MapReduce algorithm, can provide an efficient framework to aggregate large volumes of data.

data. In this paper, the performance evaluation of MySQL and MongoDB is performed where MySQL is an example of relational database and MongoDB is an example of non relational databases. A relational database (the concept) is a data structure that allows you to link information from different 'tables', or different types of data buckets.

MongoDB Multi-Document ACID Transactions. MongoDB 4.0 adds support for multi-document transactions. This makes MongoDB the only open source data platform to combine the ACID guarantees of traditional relational databases, with the speed, flexibility, and power of the document model, and the intelligent distributed systems design to scale-out and place data where you need it.

.3.1.3 Case Study – MongoDB. MongoDB is an open-source document-oriented database system developed by 10gen. It stores structured data as JSON-like documents with dynamic schemas (MongoDB calls the format BSON), making the integration of data in certain types of applications easier and faster.

### **NoSQL Databases | Research Paper - UK Essays**

BSON can accurately represent IEEE doubles, including unusual values like "Inf", "-Inf", "NaN" and "-0.0". NaN can additionally include a "payload" value. The shell and mongoexport handle these cases in problematic or inconsistent ways: Both the shell and mongoexport uses non-standard JSON for positive and negative infinity and NaN.
