A hyperbola is the set of all points in a plane, the difference of whose distances from two fixed points in the plane is a constant. 'Difference' means the distance to the 'farther' point minus the distance to the 'closer' point. The two fixed points are the foci and the mid-point of the line segment joining the foci is the centre of the hyperbola.

Hi Shaun, I have read lots of your other posts here and I always read with a smile - obviously you have got great sense of humor. I think I made my choice so quickly without any hesitation is because I am standing on the start point here, and yes you are right, such decision would be very hard if I was in the middle of passing the papers.
