Getting Started Installation. WireMock is distributed via Maven Central and can be included in your project using common build tools' dependency management.

Getting Started - WireMock

There are two special cases when converting to an specific bean, if the target bean has a Map property and it must contain other beans, JSONObject.toBean() will transform the nested beans into DynaBeans. If you need those nested beans transformed into an specific class, you can either postprocess the Map attribute or provide hints on JSONObject's attributes for conversion.
